EXPERIENCE

- Anblicks** Ahmedabad, India
Software Engineer 2 June 2024 – Present
 - Tax & Pricing Engine:** Designed and built a configurable tax, pricing, and rebate engine for Advent DMS, an established automotive dealer management platform used by major national dealer groups including Ford and Mercedes-Benz retailers, replacing hardcoded business logic with a rules-driven form architecture to handle jurisdiction-specific U.S. tax structures.
 - Inventory Data Layer:** Engineered the inventory data layer processing hundreds of thousands of vehicle records, implementing server-side pagination, advanced filtering, and list virtualization to keep large-dataset views responsive for dealership staff.
 - Reusable Architecture:** Built a reusable component architecture and configuration-driven dynamic form framework adopted across inventory, sales, financing, pricing, taxation, rebates, and customer management modules, reducing duplicated logic and accelerating delivery of new workflows.
 - Application Modernization:** Leading migration of legacy AngularJS modules to Angular 17 as part of an ongoing modernization initiative, contributing to microfrontend architecture and debugging production issues across live dealer-facing applications.
- WebOccult Technologies** Ahmedabad, India
Software Developer 1 Aug 2022 – May 2024
 - Real-Time Order Sync:** Built real-time order-sync and POS functionality with Socket.IO for a modular hospitality platform (dine-in, POS, counter, kitchen display) deployed flexibly across an estimated 1,500+ restaurant and hospitality clients in the Netherlands, keeping kitchen, billing, and customer-facing views synchronized.
 - Group Ordering System:** Designed and shipped a QR-code-based group ordering feature allowing multiple diners to join a shared cart from their own devices, handling concurrent cart mutations and conflict resolution to maintain consistent order state in real time.
 - Production Debugging:** Debugged and resolved a production WebSocket reconnection issue causing lost orders during server maintenance windows, implementing a persistent message queue with exponential backoff retry logic.
 - Performance Optimization:** Optimized the Next.js application through code splitting, lazy route loading, and dynamic imports, improving load performance and responsiveness across POS and reservation workflows.

PROJECTS

- Claude Dashboard** React, TypeScript, Node.js
Published on npm: `claude-usage-stats` *Personal Project*
 - Build & Publish:** Built and published an npm package that runs a local analytics dashboard for Claude Code sessions, installable and launchable via a single CLI command.
 - Analytics & Visualization:** Implemented token usage tracking, cost breakdowns, 52-week activity heatmaps, and model-distribution charts, giving developers visibility into their own Claude Code usage patterns.
 - Local-First Architecture:** Designed the tool to parse and aggregate session data entirely on-device via a lightweight Node.js server, ensuring no usage data leaves the user's machine.
- KwikTools** React, TypeScript, Zustand, Vite
60+ Browser-Based Developer Utilities *Personal Project*
 - Tool Suite:** Built and maintain a suite of 61+ client-side utilities across five categories – image processing (resizing, compression, favicon generation), financial calculators (GST, SIP/FD, fuel cost), developer formatters (JSON, XML, SQL), productivity tools (Pomodoro, invoice/dummy-data generators), and text/conversion utilities – running entirely in-browser with no backend.
 - State Architecture:** Used Zustand for isolated, per-tool state management, keeping each utility self-contained while sharing a common UI shell built with Tailwind CSS.
 - Privacy-First, Offline-Capable:** Shipped as an installable Progressive Web App with service-worker-based offline caching, eliminating signup, tracking, and server dependency for a fully client-side, zero-data-transmission experience.

EDUCATION

- IIIT Bangalore** Bangalore, India
Post Graduate in Data Science & AI 2025 – Present
- Gujarat Technological University** Gujarat, India
Bachelor of Technology in Computer Engineering; CGPA: 8.54/10 2019 – 2023

SKILLS

- Programming Languages:** JavaScript (ES6+), TypeScript, Python, SQL, C++
- Frontend Technologies:** React.js, Next.js, Angular, ExtJS, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI, RxJS, Redux, Zustand
- Backend, APIs & Databases:** Node.js, Express.js, FastAPI, RESTful APIs, WebSocket/Socket.IO, JWT Authentication, PostgreSQL, MySQL, MongoDB, Firebase, Supabase
- Cloud, DevOps & Tools:** AWS, Docker, Git, GitHub, Bitbucket, Postman, Vite, Webpack, CI/CD, JIRA
- Engineering:** System Design, Design Patterns, Microfrontends, Performance Optimization, SSR, Server-Side Pagination, Agile
